

Critical Governance Issues Forum April 4, 2019

Rotman

Join Directors, Senior Executives and Governance Experts at this annual event to learn about and discuss challenging topics facing boards today.

Ensure your board is ready for today's business challenges.

Gain an understanding of three critical topics facing boards today - Blockchain Technology, System Failures and Disruption - while reconnecting with fellow directors and executives.

Blockchain: Opportunities and Limits of This Emerging Technology

Blockchain technology has had mixed press over the past couple of years, primarily due to the frenzy caused by wild speculation in the unregulated cryptocurrency markets. However, it is important for Directors to understand that blockchain, the underlying technology behind cryptocurrencies, is a rapidly maturing, reliable, and safe form of digital interconnectedness that is set to revolutionize how we do business.

Blockchain can streamline business processes and transactions, strengthen supply chains, boost customer relationships, reduce costs and provide opportunities for business expansion.

This session will provide you with an understanding of the opportunities and limits of this emerging technology, as well as the key questions to ask your management to ensure they are building a robust digital strategy.

Meltdown: Why Our Systems Fail and What We Can Do About It

From train derailments and massive oil spills to bankruptcies and medical errors, Directors are increasingly facing complex and challenging system failures. These crises can threaten an organization's reputation, profitability and future viability. Instead of reacting, Directors need to understand how to work with their management teams to prevent such failures.

In this session, András Tilcsik will discuss his groundbreaking research on how complexity causes failures in a variety of modern systems - from social media to air travel - and how we can prevent meltdowns in business and life. By understanding what lies behind these failures, we can transform how we make decisions, build our teams, design our systems, and prevent the kinds of meltdowns that have become all too common.

Each participant will receive a copy of *MELTDOWN: Why Our Systems Fail and What We Can Do About It*, published by Penguin Press in 2018.

Disruption: Thriving in a Rapidly Changing World

As a Board Member, how can you tell which new competitors pose a real threat to the business and which ones you are safe to ignore? Once you identify coming disruptions, how do you respond without wasting valuable time and resources?

This session will reveal the secrets of how Silicon Valley companies think when they are disrupting and how the most agile companies in the world respond and thrive under disruption.

Expert speakers you won't find anywhere else.

Rotman Executive Program faculty are known for their ability to translate the latest research into practical applications for the workplace, and to transmit skills to participants with the best teaching techniques. Industry leaders contribute to our programs to bring you the most up-to-date best practices and a wealth of real-world experience.
